

**REMARKS**

Claims 1, 2, 11, 16, 19 and 30 are amended herein. Claim 10 is cancelled. Claims 1-9 and 11-30 are pending and under consideration.

The rejections based on Scholder are respectfully traversed.

Independent claim 1 recites a holding part to wedge one edge of the main board between the holding part and the main board attaching surface using a downward force. In contrast, Scholder teaches the flange 52 is attached to the PC board, however, the flange does not provide any wedge effect. Scholder, col. 3, ln. 50-53 and Fig. 1. Instead, the PC board is merely pulled along the track 16 and locked with the locking arms 42, 44.

Independent claim 16 recites a holding part to selectively hold one edge of the main board. Independent claim 30 recites locking the main board in place comprising selectively wedging the main board to the main board attaching surface. In contrast, the flange 52 of Scholder is not selectively attached to the PC board.

The remaining references do not overcome these deficiencies.

Furthermore, a certified translation of KR 2003-0040850 is attached, upon which the present application claims priority. Accordingly, the present date of invention is prior to the filing date of Cheng, and therefore Cheng no longer qualifies as a reference under 35 U.S.C. § 102.

Accordingly, withdrawal of the rejections is requested.

There being no further outstanding objections or rejections, it is submitted that the application is in condition for allowance. An early action to that effect is courteously solicited.

Finally, if there are any formal matters remaining after this response, the Examiner is requested to telephone the undersigned to attend to these matters.

If there are any additional fees associated with filing of this Amendment, please charge the same to our Deposit Account No. 19-3935.

Respectfully submitted,

STAAS & HALSEY LLP
